

## Fulcrum - Software FOR THE TEXTILE RENTAL INDUSTRY

### *Fulcrum Modules*

#### **Fulcrum.NET Billing Module**

The core module is a system requirement. The module includes:

- Administration module to manage the Enterprise
- Comprehensive online User Help and Documentation

Fulcrum.NET is a browser-based, enterprise industry solution.

Microsoft Server 2003 is a requirement. All users – including textile rental customers – are required to use Microsoft Internet Explorer 4.0 or higher.

Fulcrum.NET is a scalable solution capable of managing an unlimited number of plants, and is easily modifiable to fit the needs and practices of each plant in the system. Coupled with Laundry Logic service and support, Fulcrum.NET is the most Internet-ready solution in the marketplace today, ensuring your success now and into the future.

#### **Fulcrum.NET Customer Portal**

The Customer Portal Module empowers customers to manage their own transactions, from adding new wearers to requesting unscheduled deliveries. Internet transactions will add value to your service while improving efficiency.

#### **Fulcrum.NET Tracking Module**

The Tracking Module supports both bar codes and RFID chips. The software ships with tools to manage the garment ID's and make sure that you are billing for every garment that you serve.

#### **Fulcrum.Net Sales & Work Order Module**

The Sales & Work Order Module manages the garment stockroom and make-up function. The order module does **not** require the tracking module.

#### **Fulcrum.NET Emblem Module**

In conjunction with the sales and work order module, the Emblem Module documents and manages customer emblems by department, by wearer.

#### **Fulcrum.NET Mobile Accounting Module (Hand Helds)**

Mobile Accounting (Handhelds) are in development and we have committed to the release date of this module no later than June 2005.

Microsoft Business Solution financial software is a requirement for accounts receivable. Fulcrum.NET integrates seamlessly with Microsoft Great Plains.
